

Patrick Sicangco

As an experienced technical consultant, I have worked with many organizations ranging from financial to pharmaceuticals, developing and implementing software. While having a background in computer engineering, I also have also developed strong communication and speaking skills through experience.

EXPERIENCE

PLANISWARE Treose, PA

Implementation Consultant March 2016 – Present

Responsible for providing Fortune 500 customers with guidance and support in the design, configuration, use, and maintenance of enterprise project and portfolio management software; assumed the role of heading East Coast recruitment, which includes remote technical interviews, hosting on-site candidates, and refining interview materials; hosted live technical trainings on behalf of Planisware for up to 30 users. The organization has also provided Agile training courses and assisted in obtaining my **Professional Scrum Master** certification from Scrum.org.

Project - Beam Suntory

Worked with one of the leading premium spirit distilleries to support their Global Commercialization team and their Project Management practices. I assumed a manager role for a full system upgrade of the SaaS customer, requiring conformity to SLAs and other regulations. This project is managed in an Agile manner using the Scrum framework. Technical responsibilities include coding new functionalities and refactoring of legacy code to conform with new standards, and a constant communication with business users to deliver immediate value, as well as maintenance of cloud hosted servers (Red Hat Linux) and their PostgreSQL Database.

Project - Ford

Worked with the largest US automotive manufacturer to perform a kernel upgrade of their PPM software in an Agile environment. Responsibilities included code refactoring (JavaScript), server and database maintenance/upgrade, and coordinating with the global Ford team to meet all project deadlines. After a successful go-live, responsibilities included recurring technical and business side maintenance

Project - Elanco

Acted as the main technical consultant during a full system upgrade and data migration from the blueprint phase to go-live; responsibilities included setup of the data model, designing custom functionalities, and preparation of training materials with client-side project managers and business users

EIDOSMEDIA New York, NY

Application Specialist March 2014 – February 2016

Configuration of content management systems using Java, XML, and related technologies as well as client facing interaction to translate business needs into valuable technical deliveries

Project - Deutsche Bank

Product implementation; implementing proprietary technologies, mainly on the server side in a Linux Red Hat environment; creation of custom servlets to be installed in a Tomcat container, according to customer specification, using a proprietary API as well as the Core Java API and related XML parsing APIs; Creation of business logic panels using JavaScript (heavy usage of jQuery); Configuration of servlets via XML; Major use of XSLT and JSP to transform large sets of data; Experience in technical documentation and development and implementation of products based on the client's business requirements

KPMG US, LLP Montvale, NJ

Level 1 Technology Analyst September 2013 – December 2013
